## Subsea Services

# pmac

Process Measurement and Control Group was formed in 2000 offering specialised flow assurance products and integrity support services. PMAC Inspection is a member of the PMAC Group of companies who specialise in subsea corrosion inspection and integrity services to the Offshore Oil, Gas, Windfarms and related industries.

PMAC is a leading provider of a range of specialist corrosion underwater inspection services with tens of thousands of km of pipeline survey, hundreds of Structures and thousands of operational days utilising PMAC's proprietary systems and offshore technicians for most offshore Operators in over 40 countries and territories.

Utilising a unique blend of proprietary expertise and an established range of technologies; drawing on a combined knowledge of practical experience in chemistry, corrosion, inspection and electronic engineering to provide clients with a unique design and manufacturing capability, complimented with a range of service capabilities. PMAC covers a worldwide market and have gained a reputation for innovative solutions and have gained a reputation for delivering cost effective quality services.

The service offerings include; subsea Cathodic Potential monitoring (C.P) surveys utilising PMAC's proprietary system as well as Gamma Flooded Member Detection (FMD) surveys with combined skilled engineers able to perform both practices, helping reduce costs and bed space requirements.

With numerous skill sets under one roof, PMAC can offer multitasking engineers, helping reduce costs and bed space requirements.

PMAC offer a complete Offshore CP Inspection service to ensure the integrity of pipelines and structures. This service is based on proven technology with further developed hardware and software to meet industry and legislative requirements with experienced engineers who hold external certification in Cathodic Protection.

With Offices in Aberdeen and Singapore, PMAC operate globally and are licensed to operate radioactive Sources for FMD in various territories. PMAC leverages advanced equipment and techniques to provide innovative inspection solutions that deliver low cost, high quality solutions for our clients. With many years experience working with the leading underwater inspection companies, PMAC is well placed to offer our clients the benefit of this experience and proven track record to provide the best solutions.

We strive at all times to meet and exceed our client's expectations to deliver their projects within budget and help them to manage their asset inspections. PMAC has a wealth of knowledge and experience that is available to our clients to assist with their project requirements. Our personnel hold CSWIP Cathodic Protection certification at levels 2 and 3, as well as being Radiation Protection Supervisors/Officers.

PMAC work with their clients and partners to understand the challenges and objectives and make appropriate technical and business recommendations for a solution that fits their needs. The experience that PMAC Inspection has with inspection technology, procedures and staff, we not only get the right technology in place, but also make sure that the client is getting the quality information they require to make decisions regarding the maintenance of their assets. PMAC Inspection takes a very active role in managing the data collected during the project including pre-project preparation, project execution, reporting and archiving of the data using the latest in software and hardware technologies.

The management of PMAC has many years experience in working with the Offshore Oil and Gas Industry and leads a team of dedicated professionals who are focussed on meeting and exceeding our client's expectations. With extensive specialist training and a commitment to safety, quality and customer satisfaction, PMAC are ideally placed to deliver cost effective solutions to our clients with their projects no matter how large or small. PMAC are certified to ISO 14001:2015 / ISO 9001:2015 / ISO 45001:2018 as well as being Corporate Members of NACE and the Institute of Corrosion.
